## AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the present application.

## Listing of Claims:

- (Currently Amended) A capsule preparation, which comprises a capsule shell and
  contained inside the capsule shell a medicine unstable to moisture, wherein the medicine
  unstable to moisture is lansoprazole or an optically active isomer thereof or a salt thereof,
  wherein the capsule shell is stable in a low moisture state and has pH-independent disintegration
  properties, and provided that the capsule shell excludes hard gelatin and/or hydroxypropyl
  methyl cellulose as a main component of the capsule shell.
- (Original) The capsule preparation according to claim 1, which is stable in a low moisture state which is less or equal to relative humidity of about 35%.
- (Withdrawn) The capsule preparation according to claim 1, wherein the main component of the capsule shell is a gelatin containing polyethylene glycol.
- (Previously Presented) The capsule preparation according to claim 1, wherein the main component of the capsule shell is a water-soluble polysaccharide.
- 5. (Previously Presented) The capsule preparation according to claim 1, wherein the main component of the capsule shell is pullulan.
- 6. (Withdrawn) The capsule preparation according to claim 1, which combines a capsule shell comprising gelatin containing polyethylene glycol as the main component and a capsule shell comprising pullulan as the main component.
  - 7. 11. (Cancelled).
- 12. (Currently Amended) The capsule preparation according to claim [[7]]1, wherein the [[PPI]] medicine unstable to moisture is the R-isomer of lansoprazole.
- 13. (Withdrawn) The capsule preparation according to claim 1, wherein the medicine unstable to moisture is a prodrug of PPI.

Application No.: 10/591,164 Docket No.: 2006 1328A

14. (Original) The capsule preparation according to claim 1, wherein the content in the capsule is a powdered medicine.

- 15. (Original) The capsule preparation according to claim 1, wherein the content in the capsule is fine granules optionally coated, granules optionally coated and/or tablets optionally coated
- 16. (Original) The capsule preparation according to claim 15, which contains at least two solid preparations selected from fine granules, granules and tablets in combination.
- 17. (Original) The capsule preparation according to claim 16, wherein the combined solid preparations have different medicine release properties.
- 18. (Original) The capsule preparation according to claim 16, wherein at least one of the combined solid preparations has a coating layer.
- 19. (Original) The capsule preparation according to claim 18, wherein the coating layer is an enteric coating layer.
- 20. (Original) The capsule preparation according to claim 18, wherein the coating layer contains a controlled-release coating layer.
- 21. (Previously Presented) The capsule preparation according to claim 20, wherein the controlled-release coating layer is a coating layer soluble within a range of pH 6.0 to pH 7.5.
- 22. (Original) The capsule preparation according to claim 21, wherein the controlledrelease coating layer is a diffusion-control type controlled-release film.
- 23. (Original) The capsule preparation according to claim 21, wherein the controlled-release coating layer is a time release type controlled-release coating film.
- 24. (Original) The capsule preparation according to claim 16, which contains fine granules, granules or tablets having an enteric coating layer in combination with fine granules, granules or tablets having a controlled-release coating layer.
